

Is Romania preparing a feasibility study for a pumped hydropower project?

The Romanian Ministry of Energy said this week that state-owned energy company Societatea de Administrare Participațiilor &#238;n Energie S.A. (SAPE SA) is currently conducting a feasibility study to resume the development of the Tarnița Lăpușești pumped hydropower project on the Someșul Cald River in Cluj County, northern Romania.

Does Romania have a pumped hydroelectric energy storage system?

Romania is the only EU country that, despite its favorable natural conditions for the construction and operation of a pumped hydroelectric energy storage (PHES) system, does not have such a station yet.

Does Romania need a strategy for energy storage?

Based on the EU context and planning a significant uptake of renewable energy sources in its electricity mix over the following decades, Romania must also develop a strategy for the deployment of energy storage technologies.

Does Romania have a storage policy?

In response to EU Regulation 2019/943, which clarifies the role of storage and its ownership status, the Romanian authorities transposed in Law 155/2020 (amending Energy Law 123/2012) specific provisions related to new storage facilities and their management rules.

Should Romania Invest in hydrogen technology?

The currently available options for financing hydrogen technologies, as well as the unprecedented level of support for them at EU level, make it into one of the most attractive prospects for the Romanian energy sector in the next years.

Is ETES a viable solution for the Romanian energy sector?

With only one ETES large-scale facility currently operating in Hamburg, Germany, there is significant potential for replication. Versatility and scalability make ETES a solution for increased flexibility in the Romanian energy sector.

Figure 2. Layout of the Pumped Storage Scheme The total land area required for the UCPS project is approximately 731.76 ha, consisting of 310.06 ha of privately-owned land, 12.16 ha of village treasury land, 0.54 ha of waqf land, and

In its first, the Romanian government has allocated EU funds for two major battery energy storage projects via the National Recovery and Resilience Plan. A utility-scale solar-plus-storage site in northwest of the country has flipped the switch. The nation's landmark pumped storage project has attracted Japan's Itochu and

France's EDF as potential partners.

Great Britain currently has 2.8 GW of LDES across 4 existing pumped storage hydro schemes in Scotland and Wales, ... all part of the plan to protect billpayers from volatile energy price spikes ...

Pumped Storage Schemes: Drakensberg and Palmiet Water resources are at a premium in South Africa. Conventional hydroelectric power stations and the Drakensberg and Palmiet Pumped Storage Schemes play an unusual dual role in making In conventional hydroelectric power stations, the potential energy optimum use of this scarce resource. of water stored in a dam or ...

Eskom's pumped storage schemes The Drakensberg Pumped Storage Scheme generates electricity during peak periods in its role as a power station, but also functions as a pump station in the Tugela-Vaal Water Transfer Scheme. Water is pumped from the Thukela River, over the Drakensberg escarpment into the Wilge River, a tributary of the Vaal. The ...

The Tarnita-Lapustesti pumped-storage hydropower plant (Cluj County), which should have a capacity of 1,000 MW, is one of the oldest Romanian energy projects that failed ...

The Red John Pumped Storage Hydro project above Loch Ness was granted consent by the Scottish Ministers on 7 June 2021. The consent (under section 36 of the Electricity Act 1989) also granted deemed planning permission for the project. ... Scottish Planning Policy and the Highland Council Local Development Plan, however it was subject to a ...

The Drakensberg Pumped Storage Scheme is a multi-purpose project being undertaken jointly by the Electricity Supply Commission and the Department of Water Affairs. The Scheme involves three major underground excavations for the pumping and generating plant and associated waterways and access. There is in addition an extensive series of

The announcement of this joint venture follows closely on the heels of the UK government's decision to progress with a new investment framework aimed at bolstering long-duration electricity storage technologies, including pumped storage hydro.. Alongside plans for the new plant, Drax is undertaking an £80M refurbishment of its current Cruachan site.

In Romania, there are no pumped storage plants (PSPs) significant from the point of view of the National Power System (NPS). For more than 30 years, one site is expected to achieve 1000 ...

The study was published following the Scottish Government's third National Planning Framework, setting out a long term vision for development and investment across Scotland over the next 20 to 30 years commented, "... we particularly support development at Cruachan in Argyll, a nationally important pumped storage facility with significant ...

Entura completed a feasibility study for Genex Power's Kidston Pumped Storage Hydro Project in North Queensland in 2015-16. The project is now in construction and Entura is serving as Owner's Engineer. The project is highly significant because this will be the first pumped storage hydro project constructed in Australia in decades.

In Scotland, one of the countries to push hydro early, there are only a few pumped storage schemes, such as Cruachan and Foyers. Elsewhere in the UK, the prime pumped storage scheme in Dinorwig and Ffestiniog, in Wales. All the schemes hail from the 1960s-1970s, leading the wave of pumped storage development in Europe.

In its first, the Romanian government has allocated EU funds for two major battery energy storage projects via its National Recovery and Resilience Plan. A utility-scale ...

Pumped Storage Schemes: Drakensberg and Palmiet Water resources are at a premium in South Africa. Conventional hydroelectric power stations and the Drakensberg and Palmiet Pumped Storage Schemes play an unusual dual ...

Elsewhere in Scotland, Drax is developing a £500M pumped storage hydro-electric scheme Cruachan 2, which will be a new 600MW capacity plant constructed next to Drax's existing 440MW facility beneath Ben Cruachan in Argyll and Bute. The project received planning consent in July 2023 and ...

The Earba Storage Project is a proposed pumped storage hydro ("PSH") scheme with an installed capacity of up to 1,800MW and stored energy of up to 40,000 MWh making it the largest such scheme in the UK in terms of both installed capacity and energy stored.

The application is to build and operate a new 600MW pumped storage scheme utilising the existing Loch Kemp as the upper storage reservoir and Loch Ness as the lower reservoir. David Rodger, Statera Energy's business development director in Scotland, said: "We believe this is an ideal site for a pumped storage hydro scheme.

Government of Romania increases financial support for storage. The new coincides with the government increasing its financial support for energy storage via two schemes, both using funds from the EU's Modernisation Fund. Those are in addition to a scheme which uses a separate EU fund, the Recovery and Resilience fund, to support grid-scale ...

Loch na Cathrach Pumped Storage is a 450MW hydro scheme, first conceived in 2015 and granted consent by Scottish Government ministers in June 2021 (REF: ECU00000728). Located on a site around 14km south-west of Inverness, this development will harness the waters of Loch Ness, helping the deployment of more renewable power and reducing our ...

V an Dongen, C.; Bekker, B. Potential for new pumped storage schemes in South Africa. In Proceedings of the 6th IEEE International Energy Conference, ENERGYCon 2020, Gammarth, Tunisia, 28 ...

Glen Earrach Energy Limited (GEE) announced plans to develop a 2 GW pumped storage hydro (PSH) project at Balmacaan Estate, Scotland. ... rather than those with planning. That way they should be self-financing and in theory never have to draw on government support." ... with ILI Group announcing in June 2021 that the Scottish Government has ...

1.1.2 Coire Glas Hydro Pumped Storage Limited (referred to hereafter as the Applicant) is a wholly owned subsidiary of SSE plc established for the development and construction of Coire Glas Pumped Storage scheme. 1.1.3 The Applicant is proposing to construct Coire Glas Pumped Storage scheme (referred to

iii. Resettlement & Rehabilitation (R& R) Plan along with social/community development. R& R plan would be framed in consultation with the Project Affected Persons (PAPs), Project Authorities and the State Government. R & R Plan would be drafted according to the RFCTLARR 2013 and the policy of State Government. iv. Muck Disposal Plan. v. Energy ...

Exploratory tunnelling for SSE Renewables" Coire Glas project, the UK's first large-scale pumped hydro energy storage (PHES) scheme to be developed in 40 years, has been completed. The proposed Coire Glas storage development would have an installed capacity of 1,300MW and be capable of delivering 30GWh of long-duration electricity storage.

The national recovery and resilience plan (NRRP) of Romania was approved in a revised form in November 2023 that placed greater emphasis on clean energy technologies and green economic transition than its previous version. ... The City of Green Bay in Wisconsin, US, has granted a Conditional Use Permit for a large-scale battery storage project ...

Romania's Energy Minister announced on Tuesday (31 October) the launch of a procurement procedure for works (design and turnkey execution) related to the Tarni?a - ...

Elsewhere in Scotland, Drax is developing a £500M pumped storage hydro-electric scheme Cruachan 2, which will be a new 600MW capacity plant constructed next to Drax's existing 440MW facility beneath Ben Cruachan in Argyll and Bute. The project received planning consent in July 2023 and Cowi was signed on to advise in

As Pumped Storage Schemes require small storage to generate electricity for duration of up to 6-8 h during peak hours the water used can be pumped back to upper reservoir during off peak hours. ... The Sharavathy Pumped Storage project envisages to utilize the existing Talakalale dam as upper dam and Gerusoppa as lower dam without any ...

The Ingula Pumped Storage Scheme is an Eskom-led project and is South Africa's largest hydro power project to date. It involved the construction of two large dams, and a network of ancillary infrastructure in the Drakensberg range, on the border between the Free State and KZN. ... changes were made to Eskom's leadership with the plan of ...

Ingula Pumped Storage Scheme is a 1332 MW hydro-power pumped storage scheme located in the Little Drakensburg Mountain Range in South Africa. The Project was constructed as part of the national utility's new build programme which sought to

The examination of a Pumped Storage Scheme is an interactive process and involves appraisal of various aspects like Design and safety of the dam, Hydel civil design, Electro-mechanical design etc. 3.2 Concurrence to the Scheme 3.2.1 In case the Pumped Storage Scheme is found technically viable with necessary inputs

District, Maharashtra for the proposed Mhaismal Pumped Storage Project. Mhaismal Standalone Pumped storage will require 0.58 TMC of water for establishing 4800 MWh (800 MW x 6h or 600 MW x 8h) storage capacity. The pumped storage solution will provide various benefits like: 1. Energy shifting, Load levelling and peak shaving 2.

The project received planning consent from the Scottish government in 2020 and, if approved, would more than double Britain's total current electricity storage capacity. SSE hopes to make a final investment decision on £1.5 billion Coire Glas in 2024, and to fully construct and commission the pumped storage scheme by 2031.

Romania is resuming the development of the Tarni?a L?pu?te?ti pumped hydro storage project, with a planned capacity of 500 MW to 1 GW. It will be the first installation of its ...

The application is to build and operate a 600 megawatt pumped storage scheme utilising the existing Loch Kemp as the upper storage reservoir and Loch Ness as the lower reservoir. Loch Kemp Storage is part of a new generation of pumped storage hydro schemes located in Scotland. A 1km long pipe would be tunnelled connecting Loch Kemp to ...
