The product is really useful when it comes for storing waste water from RO... Earlier the water getting rejected from the RO used to go in the wash basin but now it gets stored easily in this water tank and due to its easy accessibility, the same rejected water can be used for various purposes like washing utensils, cleaning of dals, rice etc...

how do you all store your ro/di water? I store mine in a 32g Rubbermaid trashcan. After I started having some serious problems in my QT even after large water changes, i started testing my newly made water for ammonia. If it sits more than a day or two, it tests off the charts for ammonia. I've been wasting a lot of water lately.

A reverse osmosis tank is a storage tank that collects RO water after filtration. A storage tank is necessary because reverse osmosis is a slow process (it literally purifies water one drop at a time). Storing water in a tank ensures that there's always water available whenever you turn on your reverse osmosis dispenser.
