

Omega Calibre 8800/8801: This is a co-axial movement that is known for its accuracy and durability. It is used in several Omega watch models, including the Seamaster and the Speedmaster. Omega Calibre 2500: This is a durable and reliable quartz movement that is used in a number of Omega's sports and dive watches.

As I understand it, the 8900 movement winds in either direction of the rotor, so does it matter at all if I set the winder to clockwise, counterclockwise, or bi-directional? Would one be preferred? The options for Turns-Per-Day are 650, 850, and 1050. Does anyone have an idea of the TPD that will keep the 8900 wound? Thanks for all the help!

The Omega calibre 8800 is an in-house automatic movement that made a splash as the engine that powers the updated Seamaster Pro 300M (aka SMP) in March 2018 at Baselworld. It is Swiss made with 35 jewels. This movement features an anti-magnetic hairspring, Co-Axial escapement and single barrel with up to 55 hours of power reserve.

Pay homage to OMEGA's renowned ocean heritage with the Seamaster Planet Ocean watch collection. Borrowing style and dive watch inspiration from the past, it blends innovative design with today's most state-of-the-art materials.&lt;p&gt; Available through the OMEGA online shop, the Planet Ocean comes in 37.5mm, 39.5mm or 43.5mm sizes, as well as larger 45.5mm ...

The Co-Axial Movement housed inside the majority of their lineup: the Globemaster, Seamaster Planet Ocean, Aqua Terra and so many more. Featuring the Daniels Co-Axial Escapement, this movement is already a legend. The print itself comes in two sizes: 15x15" and 8x8". Our paper is eco-friendly, either consisting of 90%

In the first half of last week's post, we discussed each of the major movement differences between the 2500 (2004), 8500 (2011) and the new 8900 calibre. The 39.5mm Planet Ocean features the 8800 calibre which is similar to the 8900 though with a few key differences. The first difference is in the mainspring approach.

The new 8900 movement has been around for a little while in other Omegas like the Globemaster and Planet Ocean, but this is the first time we've seen it in an Aqua Terra. ... Normally I'd suggest a hand wound, but in the Seamaster line, with its screw down crown, that probably wouldn't be very useful. Reactions: DutchMongolian and DustinS.

Caliber 8906 is the GMT version of caliber 8900, which was the first of Omega's movements to receive the new METAS certification. Resistant to magnetic fields of over 15'000 Gauss. Free-sprung balance with silicon balance spring.

Planet Ocean 8900 43.5 Planet Ocean 2500D 42mm Planet Ocean 2500D 45mm. Save Share. Like. Sort by Oldest first Oldest first Newest first Most reactions. J. Jpfahrstar. ... I was only able to find one Seamaster Diver 8800 movement with the inscription in this area, no other watch had it.

The Caliber 8900 movement has a power reserve of approximately 60 hours. This series also has a Chronograph version that comes with an added stopwatch function and is powered by the Caliber 9900 self-winding movement, the same movement that powers the new Seamaster Diver 300m Chronograph Co-Axial Master Chronometer watches. So essentially the ...

the 8900 has two barrels and a jumping hour hand. the 8800 has a quickest date and a more durable bearing for the rotor. two barrels is better for torque, though not something you will notice. the jumping hour hand can cause issues with the alignment of the hour hand and is pretty annoying if you don't travel a lot, so i would pick the 8800.

The Omega 8800 and 8900 are both Co-Axial movements, with the 8900 being the more advanced version. The 8900 features a longer power reserve, higher magnetic resistance, and is chronometer certified, making it the superior choice for watch enthusiasts and collectors. ... Whether it's for daily wear or special occasions, the 8900 movement ...

Mine have all run well within or exceeded their METAS spec, and my current 8900 is at .06 spd over 19 days. IMHO, any mass-produced movement powering tens of millions of watches is likely to have some issues cropping up. But my understanding is that this family of movements is well-regarded as robust, accurate and reliable.

I've been the owner of an 8500 movement Aqua Terra Seamaster since November. I don't and I won't wear this watch everyday. I might wear it three days during the work week (say, every other day) and maybe if we go out on the weekend. I find that if it don't wear it two days in a row then on the third morning the energy is gone and I have to ...

Discover the elegant style of the Seamaster Aqua Terra 150M Steel watch (Ref. 220.10.41.21.10.001), and buy it online on the official OMEGA Website! ... Movement Calibre OMEGA 8900. Self-winding movement with Co-Axial escapement. Certified Master Chronometer, approved by METAS, resistant to magnetic fields reaching 15,000 gauss. Free sprung ...

The new 8900 movement has been around for a little while in other Omegas like the Globemaster and Planet Ocean, but this is the first time we've seen it in an Aqua Terra. As you no doubt already know, this new movement is a "Master Chronometer." Now you might be thinking, understandably, that Aqua Terras were already Master Chronometers, but ...

The OMEGA Seamaster Aqua Terra 150M is a sporty all-rounder that works just as well at the yacht club as in the city. ... The OMEGA Aqua Terra is powered by the manufacture's Calibre 8900. This mechanical movement is state-of-the-art and very well-suited for everyday use. The automatic winding mechanism winds the two barrels that together ...

Movement. The movement powering the Seamaster Planet Ocean Oreo GMT is the Co-Axial Calibre 8906. This movement is a modified version of the in-house Calibre 8900 Master Co-Axial movement introduced in 2015 with the Globemaster as Omega's second-generation flagship movement. The Calibre 8900 family is an iterative improvement of the prior ...

I welcome your thoughts on the reliability of the co-axial movements 8500 and 8900. I'm exploring my next Omega purchase in an Aqua Terra and wonder if one of these movements is preferred over the other, the 8900 being newer. Are either to be avoided; if so, why? My Seamaster is an older GMT 50th Anniversary and is not co-axial.

Discover the elegant style of the Seamaster Aqua Terra 150M Steel watch (Ref. 220.10.41.21.01.002), and buy it online on the official OMEGA® Website! ... Movement Calibre OMEGA 8900. Self-winding movement with Co-Axial escapement. Certified Master Chronometer, approved by METAS, resistant to magnetic fields reaching 15,000 gauss. Free sprung ...

The 8900 also has no quickset date but quickset hour hand instead. To the OP, note that the 41mm Aqua Terra, even though being the same size on paper, wears larger than the Seamaster. Because of the lack of bezel and much larger dial. Personally I would choose the 38mm for this type of watch.

?watch omega seamaster 43.5MM? [Movement] Equipped with 8900 automatic machinery, transparent bottom design; [Glass] With arched wear-resistant glass, the surface diameter is 43.5mm and the thickness is 15.5mm [Case] 316L food-grade stainless steel case 1.
