What is a high capacity supercapacitor?

Supercapacitors Abstract An ultrahigh capacity supercapacitor is fabricated using a nano-layered MXene as an active electrode material, and Ni-foil is used as a current collector. The high-quality $\text{Ti}_3\text{C}_2\text{Tx}$ obtained from supernatant during etching and washing processes improves the specific capacitance significantly.

What are Supercapacitors made of?

Supercapacitors are mainly composed of electrodes,electrolytes,and membrane. According to different electrode materials,supercapacitors can be divided into electric double layer capacitors (EDLCs),psuedocapacitors,and hybrid capacitors. EDLCs mainly store energy by adsorbing electrostatic charges on the electrode surface (non-faradaic).
