In 4L60-E, 4L65-E and 4L70-E units, it's crucial to prevent even minor leaks in the 3rd accumulator checkball assembly. Leakage at the hidden #7 checkball (Figure 1) reduces 3-4 clutch apply pressure, a direct cause of burnt 3-4 clutches. Leakage also reduces band release pressure, allowing the band to drag when it should be released, leading to burnt 2-4 bands.

## Servo valve boost accumulator

There are two types of accumulators used, some hydro-boost units use an external accumulator, while others incorporate the accumulator in the power piston. The accumulator could be either of the spring-loaded variety or nitrogen-gas type. In the event of a loss of pressurized fluid, the accumulator will provide two to three power assisted stops.
