Q or quality factor represents the efficiency of a capacitor. It is the ratio of energy stored in a capacitor to the energy dissipated as thermal losses due to the equivalent series resistance (ESR) and I^2R losses. Higher ESR can cause excessive heating in the capacitor at higher frequencies beyond its max allowable power dissipation.

We offer a broad range of SMD Aluminium Electrolytic Capacitors with capacitance values from 0.1µF to 15F, and DC voltage ranging from 1.4V to 450V. ... and converters in wind power plants. Special types are used for energy storage, for example in photoflash or strobe applications or for signal coupling in audio applications.

They are used for low-frequency coupling and decoupling, energy storage and filtering in power supplies. An electrolytic capacitor is chosen mainly for its relatively small size and only for DC applications. Reversal of polarity or application of AC would impair the dielectric layer and cause irreparable / catastrophic damage to the capacitor.
