

### What is sensible heat storage (SHS)?

TES systems primarily store sensible and latent heat. Sensible heat storage (SHS) involves heating a solid or liquid to store thermal energy,considering specific heat and temperature variations during phase change processes.

#### What are the different types of thermal energy storage systems?

Thermal energy storage (TES) systems store heat or cold for later use and are classified into sensible heat storage, latent heat storage, and thermochemical heat storage. Sensible heat storage systems raise the temperature of a material to store heat. Latent heat storage systems use PCMs to store heat through melting or solidifying.

#### What is particle thermal energy storage?

Particle thermal energy storage is a less energy dense form of storage,but is very inexpensive (\$2-\$4 per kWh of thermal energy at a 900°C charge-to-discharge temperature difference). The energy storage system is safe because inert silica sand is used as storage media,making it an ideal candidate for massive,long-duration energy storage.

### How does NREL energy storage work?

In a new NREL-developed particle thermal energy storage system, silica particles are gravity-fed through electric resistive heating elements. The heated particles are stored in insulated concrete silos. When energy is needed, the heated particles are fed through a heat exchanger to create electricity for the grid.

#### What is heat storage in a TES module?

Heat storage in separate TES modules usually requires active components(fans or pumps) and control systems to transport stored energy to the occupant space. Heat storage tanks, various types of heat exchanges, solar collectors, air ducts, and indoor heating bodies can be considered elements of an active system.

#### What is a latent heat storage system?

Latent heat storage systems use PCMs to store heat through melting or solidifying. Thermochemical heat storage systems store heat by breaking or forming chemical bonds. TES systems find applications in space heating and cooling, industrial processes, and power generation.
