Abstract--A Fuzzy Logic-based framework is proposed for control of Battery Storage Unit in Micro-Grid Systems to achieve Efficient Energy Management. Typically, a Micro-Grid system operates synchronously

with the main grid and also has the ability to operate independently from the main power grid in an islanded mode.

Each mode has an associated fuzzy logic. When P * and P are positive, the hybrid energy storage system outputs electric power to the bus. When P * and P are negative, the hybrid energy storage system absorbs the electrical energy. The fuzzy logic input and output membership functions are shown in Figure 19.
