

Storage water heater installation requirements

How do I choose a storage water heater?

Some storage water heater models have heavily insulated tank, which significantly reduce standby heat losses and lower annual operating costs. Look for models with tanks that have a thermal resistance (R-Value) of R-24 and above to avoid adding an insulation blanket (electric water heaters only).

How much space does a water heater need?

Manufacturers typically require access to a minimum of 450 or 700 cubic feet of free air space where the water heater is installed, along with ample space to allow installation and service. An 8-ft by 12-ft room with an 8-ft ceiling, for example, provides sufficient volume.

What are the requirements for piping a tankless water heater?

501.6 Water temperature control in piping from tankless heaters. The temperature of water from tankless water heaters shall be not greater than 140°F (60°C) where intended for domestic uses. This provision shall not supersede the requirement for protective shower valves in accordance with Section 412.3. 501.7 Pressure marking of storage tanks.

What are the requirements for a solar water heater?

Gas-fired water heaters shall conform to the requirements of the International Fuel Gas Code. Solar thermal water heating systems shall conform to the requirements of the International Mechanical Code and ICC 900/SRCC 300. 502.1.1 Elevation and protection.

What temperature should a water heater tank be?

Make sure that the space and positioning allow for easy access to inspect the water heater and controls, service the air filter, and drain the tank. **KEY TAKE-AWAY:** Increasing the temperature of the tank from 125°F to 140°F adds an equivalent amount of available hot water as increasing tank capacity by about 10 to 15 gallons.

What size hose do I need to install a water heater?

The drain valve inlet shall be not less than 3/4-inch (19.1 mm) nominal iron pipe size and the outlet shall be provided with a male hose thread. P2801.3 Installation. Water heaters shall be installed in accordance with this chapter and Chapters 20 and 24.

Lowboy water heater sizes can vary between 30 and 49 inches in height and hold up to 50 gallons of water. Tall Water Heater Space Requirements Gas and electric tall water heaters have size ranges from 50 to 76 inches tall and can hold up to 100 gallons of water. They're ideal for basements or garages where height isn't an issue.

The solar storage tank water heater must be installed indoors and in a vertical position on a level surface. The solar storage tank water heater should be located in an area not subject to freezing temperatures. Solar storage tank water heaters located in unconditioned spaces (i.e., attics,

About this chapter: Chapter 5 contains regulations concerning the safety of water heating units and hot water storage tanks. Heated (hot or tempered) potable water is needed for plumbing fixtures that are associated with handwashing, bathing, culinary activities and building maintenance. Heated water is commonly stored in large pressurized storage tanks that must ...

Not be directly connected to the drainage system. Discharge through an air gap located in the same room as the water heater.; Not be smaller than the diameter of the outlet of the valve served and shall discharge full size to the air gap.; Serve a single relief device and shall not connect to piping serving any other relief device or equipment.; Discharge to the floor, to the pan serving ...

Electric storage water heaters other than heat pump type water heaters manufactured prior to January 1, 2022. 501.1.3 Mini-tank Electric Water Heaters. The standby energy consumption of hot water dispensers and mini-tank electric water heaters manufactured on or after January 1, 2010, shall be not greater than 35 watts.

Water heaters shall be installed in accordance with the manufacturer's instructions. Oil-fired water heaters shall conform to the requirements of this code and the UFC 3-410-01, Heating, Ventilating, and Air Conditioning Systems. Electric water heaters shall conform to the requirements of this code and provisions of UFC 3-501-01, Electrical ...

Gas water heaters must be elevated at least 18 inches off the floor for safety reasons. However, there are exceptions to this rule. In California, the water heater must be elevated at least twelve inches off the floor. In addition, the water heater's pilot light must be at least six inches away from the floor.

The Heat Pump Water Heater can heat extra stored hot water when electricity rates are low, preventing the need to heat the water when electricity prices are high. Peak hot water demand ...

This Standard applies to storage water heaters, instantaneous water heaters, and circulating water heaters including booster water heaters. National Fire Protection Association (NFPA) 54, American National Standards Institute (ANSI) Z223.1-2018

This chapter also covers the access requirements to water heaters and hot water storage tanks to allow for the maintenance and replacement of that equipment. Code development reminder: Code change proposals to this chapter will be considered by the IRC--Mechanical/Plumbing Code Development Committee during the 2021 (Group A) Code Development ...

Electric storage water heaters with lower elements above 18", including heat pump water heaters, do not need

to be raised off the floor with a stand. That requirement was a safety provision for older atmospheric gas storage water heaters located in garages. Most electric heat pump water heaters are taller than electric storage water heaters --

directly to the water heater's storage tank. They typically harvest heat directly from the surrounding air, but can also draw from air supplied through ducted vents. Most models also have electric resistance heating elements-- like traditional electric water heaters--to use as a backup when needed, which is why HPWHs are sometimes called ...

Storage water heaters hold water in a tank and use more energy to maintain temperature throughout the day. Tankless water heaters provide hot water on-demand. Gas units require a gas line, adequate combustion air, a vent to remove combustion gas ...

Where a storage tank-type water heater or a hot water storage tank is installed in a location where water leakage from the tank will cause damage, the tank shall be installed in a galvanized steel pan having a material thickness of not less than 0.0236 inch (0.6010mm) (No. 24 gage), or other pans approved for such use.
