They work together flawlessly, in true balance with the lifting work they do. Our straddle hoisting system is well-known and field-proven in our RTG and RMG cranes. Our straddle hoisting system offers a reliable lifting capacity of 50 metric tons Safe Working Load under spreader. The yoke beam is very rigid.

Regenerative braking is a system that sends some power back to a crane's power grid during every downward or decelerated motion, instead of being dissipated by resistors. Konecranes' network braking removes the need for external braking resistors. This system decreases crane downtime, and it is more applicable for several supply voltages.
