What is the energy barrier for SF_x + H₂O reactions?

Reaction routes for the SF_x (x = 1-5) + H₂O or OH reactions. Energies are in kcal/mol. Firstly, it can be seen that all the SF_x + H₂O reactions have to overcome the energy barrier. The initial energy barrier of SF₅, SF₄, and SF₃ is about 10 kcal/mol, and that of SF₂ and SF is higher.

Is SF₆ suitable for storage using hydrate-based technology?

Thermodynamic results for the three-phase coexistence conditions of the SF₆ hydrate system demonstrated that SF₆ is well-suited for storage using hydrate-based technology. Kinetically, gas consumption in pure water was greater than in seawater, attributed to the effect of salt on the phase equilibrium condition.
