

Can energy storage support the path to net zero?

To realize what the power sector can do to support energy storage's key role in aiding the path to net zero, we need to understand the current situation in the U.S. Western region. The California ISO, the only independent western U.S. grid operator, handles more than a third of the West's load, including 80% of California and parts of Nevada.

How can we improve energy storage?

Particularly, it is necessary to ramp up efforts to support demand response and virtual power plants, establish reasonable peak-valley price difference, and encourage users to be the main market participants in energy storage transaction.

Why is energy storage important?
