The 2834-2 is part of ETA's Mecaline collection. Official documentation was found ...

Miyota 9015 movement is a remarkable upgrade from its predecessor Miyota 8215. The reason I say 9015 is an upgraded version of 8215 is because 9015 has made a lot of improvements. For example, 9015 accuracy is  $\pm 10 \sim +30$  sec/day, while 8215 movement accuracy is  $-20 \sim +40$  sec/day. Miyota 9015 is an automatic movement, meaning it winds itself ...

This 26-jewel movement ticks happily at eight beats a second, has a Novodiac shock-absorbing system and will--like the ETA--crack on for 40 hours without another wind. And Hangzhou claims an accuracy of  $\pm 15$  sec/day.
