

What is pumped storage project?

environment mainly due to improved infrastructure in the area. Proposed pumped storage project consists of an existing upper reservoir and new lower reservoir. Water will remain in circulation from upper to lower during power generation.

What is the future of water storage?

What the Future Has in Store: A New Paradigm for Water Storage calls for developing and driving multi-sectoral solutions to the water storage gap, taking approaches that integrate needs and opportunities across the whole system, including natural, built, and hybrid storage, to support many instead of few, for generations to come.

How much rainfall does the pumped storage scheme receive in a year?

Altitude on western slopes receives more than 6000 mm in a year. However, rainfall has no direct bearing on performance of the Pumped Storage Scheme, where no consumptive use of water is involved except small

What is integrated water storage planning?

The proposed integrated water storage planning framework is grounded in sustainable development and climate resilience, with the potential to pay dividends for people, economies, and environments for generations.

Key Messages:

Is water storage a siloed facility?

Most often, water storage is evaluated, designed, developed, and managed as independent facilities for specific stakeholders, resulting in siloed arrangements that are unsustainable and inefficient. o Poor planning of water storage comes with a price.

Why is water storage important?

o Water storage provides three major services: improving the availability of water; reducing the impacts of floods; and regulating water flows to support energy, transportation, and other sectors. o At the same time, the regulation provided by storage can produce clean energy, needed to mitigate climate change.
