Does energy storage allow for deep decarbonization of electricity production?

Our study extends the existing literature by evaluating the role of energy storage in allowing for deep decarbonization of electricity production through the use of weather-dependent renewable resources (i.e., wind and solar).

Are energy storage systems a viable solution to a low-carbon economy?

In order to mitigate climate change and transition to a low-carbon economy, such ambitious targets highlight the urgency of collective action. To meet these gaps and maintain a balance between electricity production and demand, energy storage systems (ESSs) are considered to be the most practical and efficient solutions.
