What is a waste transfer station?

A waste transfer station is a facility where waste is consolidated and loaded into a larger vehicle for transportation off site. No long-term storage of waste occurs at a transfer station; this process usually takes place in a matter of hours. For the purpose of this manual, facilities serving only as citizen drop-off stations or community convenience centers are not considered waste transfer stations.

What is the structure of a waste transfer station?

Transfer stations have structures that are designed to accommodate high levels of vibration from heavy equipment used to compact and load waste into the transfer vehicles. Concrete and steel floors, pillars, and other building reinforcements are essential components of these structures.

Why should you choose a custom-built energy transfer station?

Our custom-built energy transfer stations feature a compact size and weight, and are engineered to easily transport through halls and stairways as needed, with minimum hassle. Available both pre-assembled or split in easy to assemble modules if required due to space and height restrictions. Forget about waiting for on-site fabrication contractors.

What are the different types of transfer station facilities?

Some of the many variations in transfer station facility designs include push pit, lift and load, surge pit and direct tip. Moving waste has also included many types of methods including loaders, excavators, knuckle booms and others. In this article, the discussion will be based upon a few of these options and their design-build differences.
