

Should truck OEMs invest in battery technology?

More boldly, an OEM could aim to become a front-runner in the design of this technology or invest in the needed infrastructure, such as swapping stations. Second, it's uncertain how much truck OEMs should invest in own battery production capacities and upstream activities.

How do truck OEMs deal with battery manufacturers?

Leading truck OEMs typically deploy a mix of strategies. Some supplement long-term purchasing agreements with battery manufacturers with their own production capacities--mostly at the pilot stage--while others rely fully on partners using selected purchasing contracts or joint ventures.

Are battery electric powertrains a good option for trucks?

Battery pack prices have also dropped by more than 80 percent over the past ten years, making battery electric powertrains an attractive option for trucks. Hydrogen fuel cell powertrains are still a more nascent technology due to lower uptake in the passenger vehicle space.

Can heavy-duty trucks reduce emissions?

Ultimately, taking steps to reduce emissions of heavy-duty trucks will get countries closer to meeting global emission targets and pave a more sustainable road forward. Jakob Fleischmann is a partner in McKinsey's Munich office, where Patrick Kroyer is a consultant. Lena Bell is an associate partner in the Cologne office.

Can battery electric vehicles reduce road freight emissions?

Battery electric vehicle technology will be key to reducing road freight emissions and achieving global climate targets. Road freight vehicles¹ account for a significant share of global CO₂ emissions. Hence, minimizing their carbon footprint is a vital step toward achieving global climate targets.

How does battery density affect LD delivery trucks & HD semi-trailers?

An increase in the battery energy density is also beneficial for the TCO and life-cycle CO₂ of LD delivery trucks and HD semi-trailers (Fig. 4) by effectively decreasing the replacement rate. Only with an increase in the battery density can the electric LD delivery truck fleet receive both cost and CO₂ advantages over DTs.

The costs of battery and fuel cell systems for zero-emission trucks are primed to decline much faster than expected, boosting prospects for their fast global diffusion and ...

Daimler Truck prefers liquid hydrogen in the development of hydrogen-based drives. In this aggregate state, the energy carrier has a far higher energy density in relation to volume than gaseous hydrogen. As a result, the tanks of a fuel-cell truck using liquid hydrogen are more cost efficient compared to the carbon tanks used for gaseous hydrogen.

The four-wheel distributed drive pure electric mining truck, featuring a hybrid energy storage system with battery and supercapacitor, is a promising solution for achieving zero-emission in the transportation process of open-pit mines. ... the potential applications of V2C technology in energy-saving control of mining trucks have remained ...

As a new worldwide modular platform architecture, the so-called ePowertrain will be the technological basis of all medium- and heavy-duty CO₂-neutral, all-electric series-produced ...

Twenty-three per cent of electric delivery trucks and 30% of semi-trailers could achieve one-on-one replacement with diesel counterparts, while on average 3.8 electric ...

New energy electric vehicles will become a rational choice to achieve clean energy alternatives in the transportation field, and the advantages of new energy electric vehicles rely on high energy storage density batteries and efficient and fast charging technology. This paper introduces a DC charging pile for new energy electric vehicles. The DC charging pile ...

A novel coupled hydro-pneumatic energy storage system is proposed to improve the energy and power performance of the energy storage system in hybrid mining trucks. Based on four basic layouts, representing different energy conversion and storage approaches, of compressed air energy storage system and hydraulic energy storage system, a coupled layout ...

Electrical energy consumption in the opencast coal mine is very high. Electric shovels, pumps and coal handling plants consume 75% of the total electricity consumption of an opencast coal mine.

A comprehensive review of energy storage technology development and application for pure electric vehicles. Author links open overlay panel Feng Jiang a b c, Xuhui Yuan a, Lingling Hu a, Guangming Xie c, ... Taking the treatment way in New Zealand as an example [121], they used three methods to dispose of used lithium-ion batteries, but ...

Latent Thermal Energy Storage (LTES) systems adopting Phase Change Materials (PCMs) have been proposed to be implemented along the cold chain over the last years. Hence, in this work, a novel insulated wall concept for refrigerated truck is proposed. A 2D transient numerical model of the truck cell is developed.

The entire industry chain of hydrogen energy includes key links such as production, storage, transportation, and application. Among them, the cost of the storage and transportation link exceeds 30%, making it a crucial factor for the efficient and extensive application of hydrogen energy [3]. Therefore, the development of safe and economical ...

Energy storage technology is the key to sustainable development. One of its most important forms is thermal

energy storage. ... Australia, the new refrigerated truck can be maintained at $-18 \pm 1^\circ\text{C}$ for 10 h using PCMs 360 kg; And the energy cost of the cooling system is 86.4 % lower than that of the conventional system, which produces less ...

The technology is estimated to have a global energy storage potential of 7 to 70 TWh and can support sustainable development, mainly by providing seasonal energy storage services. [View Show abstract](#)

Scania battery electric truck with roadside charger in Sweden. Image: Dan Boman / Scania . Update 10 February 2022: A Soltech representative responded to an Energy-Storage.news request for some more details on the ...

FAW TRUCKS J6 new energy 2.0 new products, a total of 50 configuration upgrades, 52 performance upgrades, in the user's concerns about the "three lows and one high" (low power consumption, low weight, low cost, high reliability) and enjoy the ride and other aspects of the comprehensive solution to the user's pain points, to bring a new ...

A Florida-based startup called Ecolution Power Company is on a mission to gild the electric truck lily with kinetic energy storage, and the city of Amarillo, Texas, is one of two US locations in ...

New technology and automatic equipment for heat treating leaf-spring sheets based on using induction heating, rapid cooling by a stream of water, and a specially developed steel with controllable hardenability have been developed. The new technology makes it possible for one production example to obtain a high strength hardened layer ($\sigma \geq 2500 \text{ N/mm}^2$), a ...

The homogeneity of the temperature in the refrigerated box is essential in order to ensure the quality of the transported product and to reduce its level of health risk [1, 2]. The heterogeneity of the air temperature in a container can be explained by the heating of the air through the pallet and by the variation in the heat exchange coefficient between the air and the ...

Connected Energy has successfully installed its second-life battery energy storage systems on two UK Volvo Truck & Bus dealer sites. ... Because E-STOR uses second-life batteries from former EVs, it offers significant carbon savings compared to an energy storage system that uses new batteries. This aligns with Volvo's drive to adopt circular ...

Subscribe to Newsletter Energy-Storage.news meets the Long Duration Energy Storage Council Editor Andy Colthorpe speaks with Long Duration Energy Storage Council director of markets and technology Gabriel Murtagh. News ...

In this work, an innovative insulated wall concept for refrigerated truck is proposed. A 2D transient numerical model of the truck cell is developed and simulated considering the solar radiation ...

This paper presents a comprehensive review of various technologies that can be used specifically for refrigerated pick-up trucks. Each technology review covers the description of the technology, the current state of development, the energy-driven source, technological barriers or challenges and the needs for research and development.

In 2021, sales of ETs accounted for 1.5% of all new trucks registered in China 7, ... Energy-Saving and New Energy Vehicle Technology Roadmap 2.0 (China Society of Automotive Engineers, 2021)

Energy is essential in our daily lives to increase human development, which leads to economic growth and productivity. In recent national development plans and policies, numerous nations have prioritized sustainable energy storage. To promote sustainable energy use, energy storage systems are being deployed to store excess energy generated from ...

Finally, based on the constructed new energy truck driving condition analysis model, big data technology was used to perform a big data analysis experiment on the actual operation data of 200 ...

At present, diesel vehicles still play an irreplaceable role in the traditional energy field in China. Diesel vehicle exhaust contains hydrocarbons, carbon monoxide, nitrogen oxides, and particulate matter, which can lead to haze weather, photochemical smog, and the greenhouse effect; endanger human health; and damage the ecological environment. In 2020, the number ...

The importance of medical waste management has grown during the COVID-19 pandemic because of the increase in medical waste quantity and the significant dangers of these highly infected wastes for human health and the environment. This innovative review focuses on the possibility of materials, gas/liquid/solid fuels, thermal energy, and electric power production ...

Scania battery electric truck with roadside charger in Sweden. Image: Dan Boman / Scania . Update 10 February 2022: A Soltech representative responded to an Energy-Storage.news request for some more details on the project. It will use a lithium iron phosphate (LFP) 2MW/2MWh BESS made by Huawei, the representative said.

IDTechEx forecast that swap capable new-energy/electric heavy trucks (EHTs) sales will capture over 30% market share of total pure electric heavy trucks sales in China by the end of 2022. The IDTechEx report includes the major Chinese players in the battery swapping supply chain and technical parameters of the various battery swapping truck models.

People around the world rely on trucks to deliver the goods they need, and so-called long-haul trucks play a critical role in those supply chains. In the United States, long-haul trucks moved 71% of all freight in 2022. But those long-haul trucks are heavy polluters, especially of the carbon emissions that threaten the global

climate.... Read more

Energy storage is not a new technology. The earliest gravity-based pumped storage system was developed in Switzerland in 1907 and has since been widely applied globally. However, from an industry perspective, energy storage is still in its early stages of development. With the large-scale generation of RE, energy storage technologies have ...

Energy Storage is a new journal for innovative energy storage research, ... Electric truck gravity energy storage: An alternative to seasonal energy storage. Julian David Hunt, ... 0002-1840-7277; Climate and Livability Initiative, Center for Desert Agriculture, King Abdullah University of Science and Technology (KAUST), Thuwal, Saudi Arabia ...
