

Lead-free  $\text{Sr}_{1.85-2x}\text{Ca}_{0.15+x}\text{Sm}_x\text{NaNb}_{5-x}\text{Hf}_x\text{O}_{15}$  ( $x = 0-0.05$ ) ceramics with tetragonal tungsten bronze structure were synthesized and characterized. Compared with the  $\text{Sr}_{1.85}\text{Ca}_{0.15}\text{NaNb}_5\text{O}_{15}$  ceramic, the substitutions of even very small amount of  $\text{Hf}^{4+}$  in B site and  $\text{Sm}^{3+}$  in A site lead to a notable change of the microstructure and relevant dielectric and ...

The development of dielectric energy storage capacitors has attracted much research interest in recent years. As an important category of dielectric materials, the energy storage potential of the tetragonal tungsten bronze structure ceramic has been underestimated for a long time due to the lower dielectric constant and low breakdown strength.

Electrochromic materials play a crucial role in visually displaying the real-time energy levels in EC energy storage devices by changing their optical features in response to voltage. In this scenario, amorphous molybdenum-doped tungsten oxide (W Mo) thin films were fabricated using a one-step electrodeposition process, and the influence of Mo ...

Currently, tungsten oxides with diverse compositions and rich chemical states have received much attention in the field of energy and environment [ ]. In general, tungsten oxides possess three oxide states, including  $\text{W}^{6+}$ ,  $\text{W}^{5+}$ , and  $\text{W}^{4+}$ , respectively [ ]. For the stoichiometric oxide forms,  $\text{WO}_3$  and  $\text{WO}_2$  are two typical forms. Owing to the feature of an n-type wide ...

Dielectric energy-storage capacitors, known for their ultrafast discharge time and high-power density, find widespread applications in high-power pulse devices. However, ...

The ever-growing pressure from the energy crisis and environmental pollution has promoted the development of efficient multifunctional electric devices. The energy storage and multicolor electrochromic (EC) characteristics have gained tremendous attention for novel devices in the past several decades. The precise design of EC electroactive materials can ...

Innovation Laboratory for Sciences and Technologies of Energy Materials of Fujian Province (IKKEM), Xiamen, 361005 China ... thereby constraining their applicability in electrochromic energy storage devices (EESDs). Here, the amorphous hydrated tungsten oxide films with large optical modulation, fast response speed, large capacity, and high ...

Tungsten oxide-based materials have drawn huge attention for their versatile uses to construct various energy storage devices. Particularly, their electrochromic devices and optically-changing ...

As a vital material utilized in energy storage capacitors, dielectric ceramics have widespread applications in

high-power pulse devices. However, the development of dielectric ceramics with both high energy density and efficiency at high temperatures poses a significant challenge. In this study, we employ high-entropy strategy and band gap engineering to enhance the energy ...

Dielectric energy-storage capacitors, known for their ultrafast discharge time and high-power density, find widespread applications in high-power pulse devices. However, ceramics featuring a tetragonal tungsten bronze structure (TTBs) have received limited attention due to their lower energy-storage capacity compared to perovskite counterparts.

The graphene-based tungsten oxide nanocomposites have been reported as sensors, in water splitting devices and supercapacitors. The graphene-based tungsten oxide became an ideal material for the energy storage applications and gas sensing because the graphene act as electrical double capacitor layer which contributes to final capacitance .

Dielectric capacitors based on the relaxor ferroelectric ceramic with large discharge power density offer significant advantages for advanced pulsed power systems. Tungsten bronze-based relaxor ceramics have emerged as important candidates and have gained considerable attention in recent years. A novel Bi-doped  $\text{Sr}_2\text{NaNb}_5\text{O}_{15}$ -based relaxor ceramic ...

Energy Storage Materials. Volume 49, August 2022, Pages 370-379. ... (RAAB) is a potential candidate for safe and cost-effective energy storage device. Although tungsten oxide is a promising intercalation anode material to accommodate various metallic charge carriers, its main bottlenecks of application are the low conductivity and sluggish ...

Searching appropriate material systems for energy storage applications is crucial for advanced electronics. Dielectric materials, including ferroelectrics, anti-ferroelectrics, and relaxors, have ...

Dielectric energy-storage capacitors, known for their ultrafast discharge time and high-power density, find widespread applications in high-power pulse devices. However, ceramics featuring a tetragonal tungsten bronze structure (TTBs) have received limited attention due to their lower energy-storage capacity compared to perovskite counterparts. Herein, a ...

Dielectric ceramics with relaxor characteristics are promising candidates to meet the demand for capacitors of next-generation pulse devices. Herein, a lead-free Sb-modified  $(\text{Sr}_{0.515}\text{Ba}_{0.47}\text{Gd}_{0.01})(\text{Nb}_{1.9-x}\text{Ta}_{0.1}\text{Sb}_x)\text{O}_6$  (SBGNT-based) tungsten bronze ceramic is designed and fabricated for high-density energy storage capacitors. Using a B-site engineering ...

This study successfully fabricated filled tungsten bronze  $\text{Sr}_{2-x}\text{Sm}_x\text{Ag}_{0.2}\text{Nb}_{5-x}\text{Ti}_x\text{O}_{15}$  ceramics, demonstrating exceptional energy storage and luminescent ...

This study provides evidence that developing high-entropy relaxor ferroelectric material via equimolar-ratio

element design is an effective strategy for achieving ultrahigh ...

In the field of dielectric energy storage, achieving the combination of high recoverable energy density ( $W_{rec}$ ) and high storage efficiency ( $\eta$ ) remains a major challenge. ...

In the field of dielectric energy storage, achieving the combination of high recoverable energy density ( $W_{rec}$ ) and high storage efficiency ( $\eta$ ) remains a major challenge. Here, a high-entropy design in tungsten bronze ceramics is proposed with disordered polarization functional cells, which disrupts the long-range ferroelectric order into diverse polar ...

Energy Storage Materials. Volume 70, June 2024, 103482. Modulating charge storage mechanism of cobalt-tungsten nitride electrodes using in situ formed metal-p-n heterojunction for ultrahigh energy density supercapattery. Author links open overlay panel Selvaraj Seenivasan, Amarnath T. Sivagurunathan, Do-Heyoung Kim.

High-energy-density lithium-ion batteries (LIBs) are urgently important for energy storage systems, such as electric vehicles and large-scale energy storage [1,2,3,4,5,6,7]. Layer-structured  $\text{LiTMO}_2$  (transition metal (TM) = Mn, Co, Ni) oxides are ideal high-energy LIB cathodes due to their 2D structure, which facilitates  $\text{Li}^+$  (de)intercalation and the ability of TM ...

Lithium-ion batteries are widely used as reliable electrochemical energy storage devices due to their high energy density and excellent cycling performance. The search for anode materials with excellent electrochemical performances remains critical to the further development of lithium-ion batteries. Tungsten-based materials are receiving considerable attention as ...

This review covers electrochromic (EC) cells that use different ion electrolytes. In addition to EC phenomena in inorganic materials, these devices can be used as energy storage systems. Lithium-ion ( $\text{Li}^+$ ) electrolytes are widely recognized as the predominant type utilized in EC and energy storage devices. These electrolytes can exist in a variety of forms, including ...

In particular, electrochemical decomposition to produce hydrogen ( $\text{H}_2$ ) and oxygen ( $\text{O}_2$ ) is a promising solution; that is, the conversion of excess intermittent electrical energy into a stable chemical fuel [12, 13]. The electrochemical splitting of water is the flow of electrons through a chain, where protons (or water molecules) are reduced to  $\text{H}_2$  at the ...

As an important class of ferroelectric oxide, tetragonal tungsten bronze (TTB) compounds with the general formula  $(\text{A}1)_2(\text{A}2)_4(\text{C})_4(\text{B}1)_2(\text{B}2)_8\text{O}_{30}$  have been attracted extensive interest as energy storage materials in dielectric capacitances [14], [15], [16], [17] consists of a corner-sharing network of  $\text{B}1\text{O}_6$  and  $\text{B}2\text{O}_6$  octahedron to form different types of ...

The same applies to the tungsten semi-finished products industry which uses our tungsten metal powders to

produce high-quality welding electrodes, heavy metals and tungsten-copper and tungsten-silver alloys for electrical contacts. ... Business Unit Manager Carbides & Energy Storage Devices. 0043 (0) 4262/505-1 ; treibacher@treibacher ...

Quantitatively regulating defects of 2D tungsten selenide to enhance catalytic ability for polysulfide conversion in a lithium sulfur battery. Hao-Jie Li, Kai Xi ...

In addition, an energy storage indicator and a complementary electrochromic energy storage smart window were constructed based on the Nb 18 W 16 O 93 films, respectively. We believe that the tungsten-bronze-based bimetallic oxide nanomaterial with dual-function high-rate electrochromism and energy storage is promising for applications in energy ...

The tetragonal tungsten bronze structure Sr 4.5-x Ba x Sm 0.5 Zr 0.5 Nb 9.5 O 30 (x = 2.5, 3, 3.5, 4, 4.5) ceramics were prepared by the strategy of co-doping Ba 2+, Sr 2+, Sm 3+ in the A-site and ...

3.1 W 18 O 49 NWs for photovoltaic applications. Large-scale utilization of solar energy and technologies is the final solution to address the excess emissions of CO 2. Photovoltaics (PV) or solar cells have been considered the most efficient way to utilize solar energy on a large scale [66,67,68]. Exploring and investigating new materials and technology is ...

Rechargeable aqueous aluminum-ion battery (RAAB) is a potential candidate for safe and cost-effective energy storage device. Although tungsten oxide is a promising intercalation anode material to accommodate various metallic charge carriers, its main bottlenecks of application are the low conductivity and sluggish redox kinetics. Herein, a novel W 18 O 49 ...

Generally, there are three major factors restricting the material to possess all-round excellent performance: Firstly, there was always a trade-off between high optical contrast/high energy storage with fast color switching [10], which was because that massive insertion and extraction of ions will not only provide high energy storage level and wide ...

In this work, we proposed a multiscale regulation strategy to improve the energy storage performance of Sr 0.5 Ba 0.5 Nb 2 O 5 unfilled tungsten bronze structure ceramics ...

Modulating charge storage mechanism of cobalt-tungsten nitride electrodes using in situ formed metal-p-n heterojunction for ultrahigh energy density supercapattery.

Energy Storage Materials. Volume 45, March 2022, Pages 1229-1237. ... The solvothermal and annealing

method was used to prepare a series of tungsten selenide materials, similar to the previous reports [33, 43]. Firstly, carbon nanotubes (CNTs) were activated. 2 g CNTs was added in a round-bottom flask containing 60 mL concentrated nitric acid ...

Energy and environmental issues received widespread attentions due to the fast growth of world population and rapid development of social economy. As a transition metal dichalcogenide, tungsten disulfide (WS<sub>2</sub>) nanomaterials make important research progress in the field of energy conversion and storage. In view of the versatile and rich microstructure of these ...
