

What are the main energy sources in Tuvalu?

The only national energy source is biomass (18% of total consumption). Photovoltaic and thermal solar contribute for less than 1%. The balance of supply is oil (Fig. 2). Tuvalu is close to being a totally oil dependent economy.

Should energy data be consolidated in Tuvalu?

One of the study's recommendations is the consolidation of all energy data, to build an energy balance and to include it in the annual economy report. Since Tuvalu's electricity generation efficiency is low, around 35%, the significance of the electricity sector is higher in the primary energy balance than in final end-use consumption.

How can Tuvalu protect its energy supply?

Protect Tuvalu's energy supply from the whims of the international market. Using specific bioenergy technologies such as biogas digestion can help reduce pollution, runoff and contamination from organic waste, including human and animal sewage, therefore preventing land, sea, and groundwater contamination.

What is Tuvalu's energy policy framework?

A PIEPSAP (Pacific Islands Energy Policy and Strategic Action Plan) National Energy Policy Framework has been developed for Tuvalu which emphasises renewable energy technologies (RET's) for sustainable development. Once the GoT has accepted this framework, it must be put into practice.

What are the characteristics of Tuvalu's energy consumption?

Analysis of Tuvalu's energy consumption reveals the following characteristics: o Tuvalu's economy is almost totally dependant on oil. Only around 18% comes from local biomass resources, which is not accounted for in official statistics and is not the object of any active policy.

Can Tuvalu deal with oil price increases?

Currently, Tuvalu does not have the capacity to deal with further price increases for imported oil: increasing the vessels energy efficiency could be an option, but the social need for an affordable transportation service for passengers and freight is an absolute priority for politicians and decision makers.
