

Use waste batteries to store energy for home use

Why should we recycle used lithium-ion batteries?

Recycling used lithium-ion batteries (and the devices that contain them) will help address emerging issues associated with the clean energy transition and prevent problems caused by inappropriate battery disposal. End-of-life lithium-ion batteries contain valuable critical minerals needed in the production of new batteries.

Should batteries be recycled?

Making sure these smaller lithium-ion batteries get collected and recycled will support the growing battery recycling industry in the U.S. Sending end-of-life batteries for recycling also keeps them out of the household garbage and recycling systems, where they can start fires and endanger workers and nearby communities.

Are waste batteries a resource waste?

Massive spent batteries cause resource waste and environmental pollution. In the last decades, various approaches have been developed for the environmentally friendly recycling of waste batteries, as attractive secondary resources.

Is a battery a universal waste?

Once a battery has arrived at the destination facility (i.e., a permitted treatment, storage, or disposal facility or a hazardous waste recycler) for recycling or disposal, it is no longer a universal waste, but a fully regulated hazardous waste.
