Is a vanadium redox flow battery a promising energy storage system?

Perspectives of electrolyte future research are proposed. The vanadium redox flow battery (VRFB),regarded as one of the most promising large-scale energy storage systems,exhibits substantial potential in the domains of renewable energy storage,energy integration, and power peaking.

Can vanadium flow batteries decarbonize the power sector?

Vanadium flow batteries show technical promisefor decarbonizing the power sector. High and volatile vanadium prices limit deployment of vanadium flow batteries. Vanadium is globally abundant but in low grades, hindering economic extraction. Vanadium's supply is highly concentrated as co-/by-product production.

Why are vanadium batteries more expensive than lithium-ion batteries?

As a result, vanadium batteries currently have a higher upfront cost than lithium-ion batteries with the same capacity. Since they're big, heavy and expensive to buy, the use of vanadium batteries may be limited to industrial and grid applications.

Why is the vanadium market so volatile?

We found that the vast majority of vanadium is produced as a co-/by-product in a highly concentrated supply chain, which helps explain the extreme volatility in supply and price witnessed in the vanadium market. These factors also cause concern for the upper bound of the rates at which annual supply can feasibly grow.

Is the prohibitive price of vanadium a supply chain problem?

Thus, the prohibitive price of vanadium may remain a separate issuefrom the supply chain challenges discussed here. One method to reduce the burden of the vanadium price does exist via a new market of electrolyte leasing, where a third-party company leases the vanadium - usually in the form of VRFB electrolyte - to a battery vendor or end-user.

How much does vanadium cost?

The current market price of vanadium translates to a total VRFB electrolyte cost of approximately 125 \$/kWh[33,34],which is close to the price of some entire,state-of-the-art LIB packs (whose cost continues to decline,driven primarily by electric vehicle demand) [35].
