Storage mode does not really make much sense on a battery that is cycled daily, as would be the case when using ESS. As a result Storage mode should be disabled when using ESS. I ran into this bug myself years ago when still running Hub4, reported it, and as a result VEConfigure will disable storage mode when you configure the ESS assistant.

## Vd4 energy storage mode

With the increasing penetration of wind power into the grid, its intermittent and fluctuating characteristics pose a challenge to the frequency stability of grids. Energy storage systems (ESSs) are beginning to be used to assist wind farms (WFs) in providing frequency support due to their reliability and fast response performance. However, the current schemes ...

I do think the storage rule is implemented wrong though - if I look at the specs for the storage mode. Storage mode says: "The Storage mode kicks in whenever the battery has not been subjected to discharge during 24 hours.". So, if it was in storage mode, and then inverted for 2 hours, it should definitely not go back to storage mode again.
