

## How does a villagrid Solar System work?

Your PV (Photovoltaic solar system) collects energy from the sunand stores it in your VillaGrid Storage System. Your system connects to a Inverter which converts the DC energy stored in your VillaGrid battery storage system and converts it to usable AC energy that your home appliances can use.

### Can I store solar energy at my home?

The majority of home solar energy systems are connected to the electricity grid. So rather than send the extra solar electricity back to the grid, you can store it at your home. Our all-inclusive solar storage system maximizes the energy collected and makes it available when you need it most.

## Why do I need a solar energy storage system?

The VillaGrid allows you to take control of your home energy management and electric usage rather than being relying solely on the grid. Including a Solar Energy Storage System in your home you are assisting us in helping to safe guard our planet.

## How much does a villagrid Solar System cost?

If you want to install the VillaGrid as part of a solar-plus-storage system, battery costs are just one part of the equation. A 5 kilowatt (kW) solar energy system costs anywhere from \$9,000 to \$15,000, depending on where you live and the type of equipment you choose.
