

How does water supply affect South Africa's water security?

A decrease in water supply threatens South Africa's water security due to negative impacts on yields arising from climate change, degradation of wetlands and water resources, and siltation of dams, whilst water losses and demand are escalating due to population and economic growth, urbanization, inefficient use, and changing lifestyles.

Is water management area storage above the historical median?

Water management area storage The comparison of the long-term historical median storage levels (2016-2022) of water management areas and the past two hydrological years' median storage is presented in Figure 5.6. The 2021/22 storages have been above the historical median for all

Is water storage a siloed facility?

Most often, water storage is evaluated, designed, developed, and managed as independent facilities for specific stakeholders, resulting in siloed arrangements that are unsustainable and inefficient. o Poor planning of water storage comes with a price.

Does South Africa have a water-constrained economy?

"In South Africa, because we have a fundamentally, water-constrained economy, the engineering philosophy that has underpinned all the design has been an indirect reuse model. This means that all the water coming through the economy must be treated to a high standard. That's the Green Drop Report.

Why is there a global water storage gap?

Just as world populations need more storage, the volume of freshwater storage is in decline, creating an international crisis: a global water storage gap. o Over the last 50 years, the global population has doubled, generating a constantly increasing demand for water and commensurate water storage.

Will the Lesotho Highlands Water Project shutdown exacerbate water scarcity in Gauteng?

Amid this water crisis looms a critical challenge: the six-month shutdown of the Lesotho Highlands Water Project (LHWP), slated to commence in October 2024. This shutdown threatens to exacerbate existing water scarcity issues, particularly in Gauteng, where 60% of the water demand is met by this project.
