What is an energy storage system?

Powering the Future: Safeguarding Today with Energy Storage Systems According to the National Fire Protection Association (NFPA), an energy storage system (ESS), is a device or group of devices assembled together, capable of storing energy in order to supply electrical energy at a later time.

Can I provide power via a stored-energy emergency power supply system (sepps)?

Instead of providing two separate power supplies, you are permitted to provide power to a fire alarm system via a Stored-Energy Emergency Power Supply System (SEPPS), also known as an Energy Storage System (ESS) or an Uninterruptible Power Supply (UPS). The SEPPS must be configured in accordance with NFPA 111 and provide 24 hours of backup battery.
