

How long does an energy storage system last?

While energy storage technologies are often defined in terms of duration (i.e., a four-hour battery), a system's duration varies at the rate at which it is discharged. A system rated at 1 MW/4 MWh, for example, may only last for four hours or fewerwhen discharged at its maximum power rating.

Conversely, until energy storage is cost-effective and capable of long-duration storage, it's not worth investing in more renewable energy sources. That's a key reason why California's proposal is so important for developers. Building an energy storage system that can at least initially replace power "peakers" (often gas-powered ...

However, not all grid scale energy storage technology is "long" in duration. For example, the Pillswood battery energy storage system (BESS) located near Hull stores energy for two hours at a time.
