Electricity Storage (ES) is capable of providing a variety of services to the grid in parallel. Understanding the landscape of value opportunities is the first step to develop assessment ...

The electricity grid is the largest machine humanity has ever made. It operates on a supply-side model - the grid operates on a supply/demand model that attempts to balance supply with end load to maintain stability. When there isn't enough, the frequency and/or voltage drops or the supply browns or blacks out. These are
