How do battery energy storage systems work? Simply put, utility-scale battery storage systems work by storing energy in rechargeable batteries and releasing it into the grid at a later time to deliver electricity or other grid services. Without energy storage, electricity must be produced and consumed at exactly the same time.

E k = ½ Io 2. where I is the moment of inertia and o is the angular velocity of the rotating disc; when o or I increases, the energy of the system increases. Once made of steel, flywheels are now made of a carbon fiber composite which has a high tensile strength and can store much more energy.
